TITLE : DISPLAY MODULE

ABSTRACT : PROBLEM TO BE SOLVED: To prevent the dielectric breakdown of an integrated circuit element by coming of a TCP mounted with an LSI for driving an LCD panel into contact with conductive shielding cases and the consequent electrification.

SOLUTION: This LCD module is constituted by housing the TCP 8 consisting of the LCD panel 2 for display, the LSI 16 for driving and a flexible tape 7 and a spacer 3 for supporting these members into the shielding case 1. A side wall stopper 13 integral with the spacer 3 is formed in the part of supporting the TCP 8 and is terminated at the TCP 8. The TCP 8 is surely insulated from the shielding cases 1, 5 consisting of metals and, therefore, even if the shielding cases 1, 5 are electrified, the integrated circuit element of the TCP 8 is prevented from inducing dielectric breakdown.
